CardExchange®

Cloud Suite

The Ultimate Cloud-Based
Solution

CardExchange® Cloud Suite
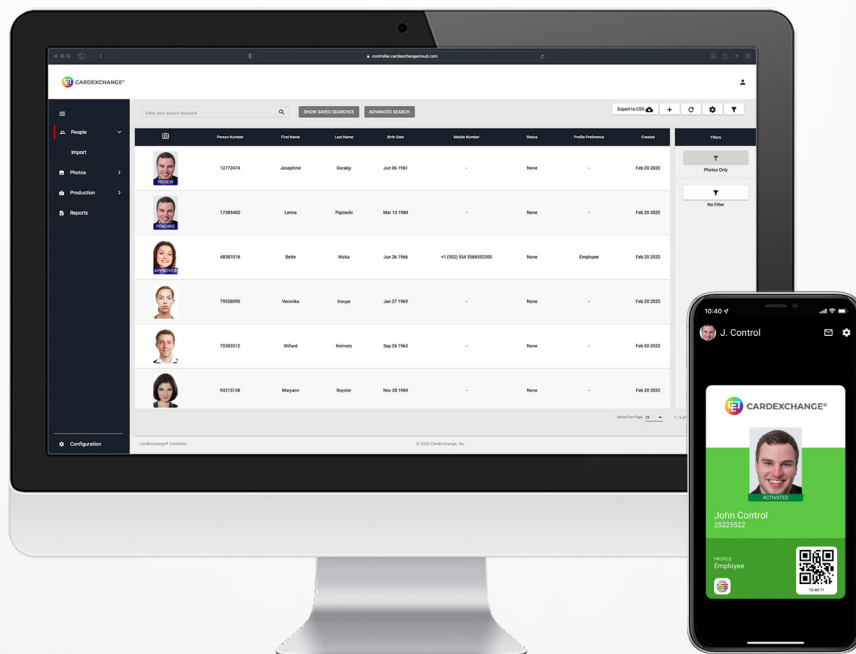

Structure:

CardExchange® Cloud is built on built on the trusted Microsoft's Azure™ infrastructure, using proven technologies offering the highest security standards and a choice of global hosting locations.

CardExchange Inc is ISO 27001:2013 certified, demonstrating our commitment to data security and protecting the personal information of your users. CardExchange® Cloud features tools to manage your data privacy and GDPR obligations. WCAG 2.1AA compliance ensures that everyone can access and use our services, regardless of their accessibility needs.

We offer a wide range of project management services covering consultancy, implementation, training and custom development. Our extensive experience allows us to support you with the successful implementation of your project, regardless of size or scope.

The Ultimate Cloud Solution

CardExchange® Cloud Suite:

CardExchange® Cloud is a SaaS based card management system offering a scalable solution for the enrollment, issuance, and management of both physical and digital credentials. As a cloud-based solution, you can control and manage your data, integrations, card holders and their credentials anywhere, from any device.

The CardExchange® Cloud Suite offers enterprise level functionality with a choice of services and plan sizes to suit the needs of any organization

CARDEXCHANGE®

Meet the services:

CardExchange® Controller

CardExchange® Controller is the central hub of the card management system. It is used to manage your enrolment processes and allows you to add, view and edit card holder, address and profile data. Create, issue and manage credentials, automatically updating card/credential data in connected systems. Manage the card production and Photo and ID document approval processes. View photo and change history, create and produce custom reports.

CardExchange® Stand

CardExchange® Stand allows you to instantly deliver a fully branded virtual/digital ID card directly to any smartphone. It can be accessed through a browser on any device, or by using our dedicated iOS and Android apps. The Stand also offers self-service functionality, allowing a card holder to upload their photo and ID documents, and activate/block/request cards.

CardExchange® Press

CardExchange® Press is a Windows based print client managing the card design, printing and encoding processes. It integrates directly with the CardExchange® Cloud database so it can be installed on any computer, anywhere, giving you the ability to print and encode cards locally or globally at the press of a button. Press can also be used by a third-party bureau service too, allowing them to manage your card production and fulfilment processes on your behalf.

CardExchange® Bridge

CardExchange® Bridge is a data connection service providing a seamless integration between the CardExchange® Cloud Suite and your existing systems. Synchronize incoming card holder data and update connected systems with card status, automatically, and in real-time. Bridge offers a choice of integration platforms including an on-premise database connector, REST-API, and a connector development service.

CardExchange® Secure

CardExchange® Secure is a single sign on (SSO) integration service for the CardExchange® Cloud Suite. It allows you to integrate and authenticate your users using external identity providers and platforms such as SAML and OAuth®.

CardExchange® Admin Center

CardExchange® Admin Center is included with your Controller subscription and gives you powerful tools to manage and configure your CardExchange® Cloud Suite. Define users, groups, and roles. Configure email settings and message content. Define business rules, actions, workflows and notifications. Setup your virtual ID card, choose colour schemes and branding. Archive, restore and delete records. With Admin Center, you are in control.
